

APPLICATION BULLETIN

Customer: Major Pickle Processor

Application: Transport of brine stock

Product: ROPAK™ 45"x48"x34" containers

Problem: The company was using fiberglass bins for the shipment of their brine stock to various destinations. The bins were susceptible to breakage and needed frequent and costly repair. Difficulty in stacking the bins and poor cube utilization worsened their problems.

Solution: ROPAK containers offer better product protection, improved handling and stacking, and significant cost savings on truckload quantities.

Results: With the conversion to continuous-use collapsible containers, the company cut costs by more than 50% while increasing efficiency. The second phase converted an existing system of using wood pallet boxes for green pickles to using ROPAK collapsible containers. This eliminates the need for two unique containers within the corporation.
